Heat Pumps are Air Conditioners

With the rising costs of heating a home, everyone is scrambling to find heating alternatives and supplements. More and more, heat pumps are proving to be the way to go. In addition to saving money during the winter season, a heat pump can be a very efficient way to keep you cool during the summer without obstructing the view from your window.

Heat pump

Modern heat pumps cool a room by absorbing inside heat and releasing it outside. This is much more efficient than the first models which were equipped with modified, standard air conditioner compressors that weren't strong enough to handle the double duty. Therefore, the compressors and other components broke down. As a result of the breakdowns, heat pump manufacturers began developing more reliable compressors and components specifically designed to handle the demand of the heat pump.

Today's heat pumps are designed to handle its demands, while being the most energy efficient home heating system on the market. Its cooling ability is as reliable as its heating ability.

So, instead of changing out that that heavy air conditioner twice a year, call One Stop Home Repair for a Free Energy Analysis, to find out if a heat pump is right for you. Bask in the year round savings. The cost effectiveness pays for itself!

Meet the Crew – Tracy Stevens

If you've called the office within the last couple months, you may have been greeted by Tracy Stevens, our newest member of the One Stop

Home Repair Team. She lives in Corinth with her husband of 24 years. She has 2 children as well as 2 cats and 2 hamsters.

Tracy attended Eastern Maine Community College and earned her Associates Degree in Digital Graphic Design. She earned her Associates Degree in Computer Information Management at Beal College. In addition to her formal education, Tracy has a strong background in customer service.

The customer service experience helps Tracy as she handles incoming phone calls. She also books appointments and helps with various office duties.

Tracy finds talking with customers and helping them solve their problems most rewarding.

In her spare time, Tracy enjoys reading, spending time with her family, and fooling around on her computer.

Photo of the Month

A heat pump takes little space in a room.

June Checklist

- ❖ Wash the exterior your home. One Stop Home Repair recommends pressure washing dirty siding early in the spring.
- ❖ Inspect your deck and patio furniture. Repair, paint or stain where needed.
- ❖ Before starting your propane grill do a thorough cleaning and inspect fittings and hoses for any imperfections. Also make sure it is at a safe distance from your house and away from flammable objects.
- ❖ Consider cutting down sick or dead trees and trim shrubs.
- ❖ Remember to water your garden if it hasn't rained for 4 or 5 days.

Did You Know?

- ❖ June is named after the Roman goddess Juno, who is the goddess of marriage.
- ❖ Iceland folklore says that bathing nude in morning dew on June 24 is supposed to keep you from aging.
