

When was the Last Time Your Water was Tested?

If you can't remember the last time your water was tested, a test is definitely overdue. Well water should be tested every 10 years. Wells should be sanitized twice a year.

Even regulated, deemed safe, crystal clear tap water might be hiding very low levels of potentially harmful substances. While they aren't immediately harmful, these substances could eventually lead to chronic health issues. You owe it to yourself, and your family, to install a Whole House Water Filtration System to maximize the cleanliness of your water.

A Whole House Carbon Filtration System is generally recommended in homes with city water. This general, multipurpose system is effective in removing chlorine, odors and VOCs, to provide chemical free water from all of the sources in your home.

If your home's fixtures leave orange and brown stains around your fixtures, a system should be installed to remove the iron sediments, and/or bacteria within your water. A house system can be designed to remove contaminants. A softener can be combined with any whole house filtration system and work together to provide clean and soft water from every faucet. A water softener by itself is not a filter.

Above anything else, One Stop Home Repair recommends sanitizing your well. Give us call and save \$10 if you sanitize your well in April. With a whole-house filtration system installed in your home can rest assured that every drop of water that enters your home is clean and safe anywhere in your home, even the backyard sprinkler. Call One Stop Home Repair today for an estimate to install whole-house filtration system in your home.

Ask Handy Howie

What are the Benefits of Using a Whole-House Water Filtration System?

- 1) Healthier showers and baths, which leads to healthier skin and hair.
- 2) Longer life expectancy of pipes and water-dependent appliances.
- 3) Brighter, longer lasting clothing.
- 4) Helps to reduce soap scum on dishes.

Quick Handyman Projects

Even though, you can always ask your favorite handyman to help with your quick projects, you can save money by doing some of them on your own.

Changing a smaller whole house water filter is fairly straightforward. If you need assistance, don't hesitate to give us a call.

Always ask a professional if you're unsure you can complete a project.

One Stop Home Repair understands safety is priceless.
