Saving Money is Still Possible with Low Oil Prices

Heating season is around the corner. It's no secret that heating oil is more affordable than last year. This does not mean alternate heating sources should be put on the back burner. Heat pumps and natural gas still provide a variety of advantages that don't come with heating oil. One Stop Home Repair can perform a free energy analysis to help you determine the best options for your home.

Heat pumps are safer than most other supplemental heating sources because there are no flames or hot surfaces. Moreover, you can leave the heat pump on while you are away or while you sleep without having to worry about a disaster. With a heat pump as a supplemental heat source, the cost of heating with electricity in conjunction with oil is still lower than the cost of heating with oil alone. Heat pumps also conveniently allow you to change the temperature of your home without leaving your chair. You can also program a heat pump to supply heat to your home based on your schedule. Some heat pumps can even be programmed to interface with your smart phone, so you can use that as a remote. Heat pumps aren't any louder than an oscillating fan on low. They are far quieter than a traditional window-mounted air conditioner.

Natural gas is convenient. It's piped directly to your home and is used on as-needed basis, much like electricity, so it's not necessary to keep a bulky fuel tank or schedule a truck to fill you up. Since there is no tank, as long as you keep up with your monthly bill, you will never run out. Moreover, due to the pipeline being underground, it is not susceptible to weather conditions and damages that are associated with having to let a truck deliver oil to your home. Natural gas is also the cleanest burning fossil fuel because during the near perfect combustion process, very few pollutants are discharged into the atmosphere. Also, due to how effectively it burns, natural gas doesn't leave behind soot, ash or odors.

One Stop Home Repair has your back this heating season, we are on the lookout for the easiest and most efficient ways to heat your home. Natural Gas or Supplemental Heat Pumps are the wonderfully viable options. Call One Stop Home Repair for a free energy analysis to determine which option will provide you with the the best combination of convenience and economy this heating season.

Meet the Crew
Kevin Cash

Kevin Cash joins us from Hudson where he lives with his wife and their dog, "Bear".

Along with his experience in the United States Army, Kevin brings more than 15 years of contracting experience to One Stop Home Repair. His expertise includes framing, finish carpentry, siding installation and repair, roofing and cabinetry.

In his work, he strives to satisfy the customers he works for. He ensures their projects are completed in a professional, timely manner and that they successfully meet the customers' needs.

In his spare time, Kevin enjoys racing, hunting and skiing.
