### Ask Handy Howie

#### When Should an Electrician Be Called?

It's possible that electric current can make a plate a bit warm to the touch, but an outlet should never be hot. If you find a hot outlet, unplug all items in that receptacle and call an electrician immediately. Refrain from using that particular outlet until an electrician says it's okay to use.

Dimming or flickering lights could be caused by a larger problem other than the light fixtures. Moving lights to different circuits, or major appliances to their own lines might be a solution. Consult with an electrician.

If burnt odors are coming off an outlet, turn off and unplug anything connected to it. Refrain from using the outlet until an electrician has deemed it safe to use again.

### Photo of the Month

Before: The old 1960's style stove, pictured on the left, needed to be replaced.

After: One Stop Home Repair modified the cabinet to fit a new stove.
